DETAILED ACTION

1. Claims 21, 24, 28-36, 38, 41, 43, 51, 57, 63, and 69 have been cancelled.
2. Claims 1-20, 22-23, 25-27, 37, 39-40, 42, 44-50, 52-56, 58-62, 64-68, and 70-71 are pending.

Response to Arguments

1. Applicant's arguments filed 30 June 2008 have been fully considered and they are persuasive.

Allowable Subject Matter

2. Claims **1-20, 22-23, 25-27, 37, 39-40, 42, 44-50, 52-56, 58-62, 64-68, and 70-71** are allowed.
3. The following is an examiner's statement of reasons for allowance: The present invention is directed towards mechanisms for allowing more flexible use of security mechanisms when communicating using electronic messages. Each independent claim identifies the uniquely distinct features **"a first security token in a header portion of the electronic message, wherein the electronic message is a Simple Object Access Protocol (SOAP) envelope in which the header portion is the header portion of the SOAP envelope"**.

The closest prior art, Spies et al. (Pub No. 2005/0138353) discloses an identity-based-encryption message management system for managing email. Some of the email may be encrypted using identity-based-encryption (IBE) techniques. When an incoming IBE-encrypted message for a recipient in an organization is received by a gateway at the organization, the gateway may request an IBE private key from an IBE private key

generator. The IBE private key generator may generate the requested IBE private key for the gateway. The gateway may use an IBE decryption engine to decrypt the incoming message. The decrypted message can be scanned for viruses and spam and delivered to the recipient. Outgoing email messages can also be processed. If indicated by message attributes or information provided by a message sender, an outgoing message can be encrypted using an IBE encryption engine and the IBE public key of a desired recipient.

However, either singularly or in combination, Spies et al. fail to anticipate or render obvious the claimed limitations of a first security token in a header portion of the electronic message, wherein the electronic message is a Simple Object Access Protocol (SOAP) envelope in which the header portion is the header portion of the SOAP envelope.

The closest prior art, Maruyama et al. (US Patent No. 6,990,585) discloses digital signature techniques using an information terminal, such as a portable terminal, having limited calculation resources. In one embodiment, a signature demandant generates a document to be signed, and an agent receives this document. The agent generates summary text for this document, and transmits the summary text to a signatory, and the signatory displays the summary text using his or her information terminal. The signatory confirms the contents, employs a private key stored in his or her terminal to sign (encrypt) the summary text. The signatory thereafter transmits a signature value to the agent, who generates a signed document that includes the signature value. Finally, the

signature demandant verifies (decrypts) the received signed document using the public key of the signatory and confirms the contents.

However, either singularly or in combination, Maruyama et al. fail to anticipate or render obvious the claimed limitations of a first security token in a header portion of the electronic message, wherein the electronic message is a Simple Object Access Protocol (SOAP) envelope in which the header portion is the header portion of the SOAP envelope.

The closest prior art, Wyman (US Patent No. 5,438,508) discloses a distributed computer system employs a license management system to account for software product usage. A management policy having a variety of alternative styles and contexts is provided. Each licensed product upon start-up makes a call to a license server to check on whether usage is permitted, and the license server checks a database of the licenses, called product use authorizations, that it administers. If the particular use requested is permitted, a grant is returned to the requesting user node. The product use authorization is structured to define a license management policy allowing a variety of license alternatives by values called "style", "context", "duration" and "usage requirements determination method". The license administration may be delegated by the license server to a subsection of the organization, by creating another license management facility duplicating the main facility. The license server must receive a license document (a product use authorization) from an issuer of licenses, where a license document generator is provided. A mechanism is provided for one user node to make a call to use a software product located on another user node; this is referred to

as a "calling card", by which a user node obtains permission to make a procedure call to use a program on another node. A management interface allows a license manager at a server to modify the license documents in the database maintained by the server, within the restraints imposed by the license, to make delegations, assignments, etc. The license documents are maintained in a standard format referred to as a license document interchange format so the management system is portable and can be used by all adhering software vendors. A feature of the database management is the use of a filter function.

However, either singularly or in combination, Maruyama et al. fail to anticipate or render obvious the claimed limitations of a first security token in a header portion of the electronic message, wherein the electronic message is a Simple Object Access Protocol (SOAP) envelope in which the header portion is the header portion of the SOAP envelope.

4. Therefore, **claims 1, 23, 37, 44, 56, 58, 65, 68, and 70** and the respective **dependent claims 2-20, 22, 25-27, 39-40, 42, 44-50, 52-55, 59-62, 64, 66-67, and 71** are in condition for allowance.

Conclusion

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
